- WINDOWS 10 Pro RS1 (Build 14393)
- Nothing was removed
- Disable all telemetry And improved privacy

System requirements:

Processor: 1 gigahertz (GHz) or faster.
 RAM: 1 gigabyte (GB) (32-bit) or 2 GB (64-bit)
 Free hard disk space: 16 GB.
 Graphics card: Microsoft DirectX 9 graphics device with WDDM driver.

Install Instruction:

Use "Rufus" to create Bootable Window 10 USB for Legacy BIOS and UEFI

1. First Download the torrent file.
2. Connect the USB flash drive that you want to use for this.
3. Run the Rufus .exe file, and click/tap on Yes if prompted by UAC.
4. Follow the Step

Under Device, select the USB flash drive you want to format and use.

Under Format Options, check Create a bootable disk using, select the ISO Image option, click/tap on the browse icon

(http://www.tenforums.com/attachments/tutorials/6706d1412912465-usb-flash-drive-create-install-windows-10-a-icon.jpg) to navigate to and select your 64-bit Windows 10 ISO file, and then make sure that Standard Windows installation is selected (dotted).

Under Partition scheme and target system type, select GPT partition scheme for UEFI.

Under File system, select FAT32.

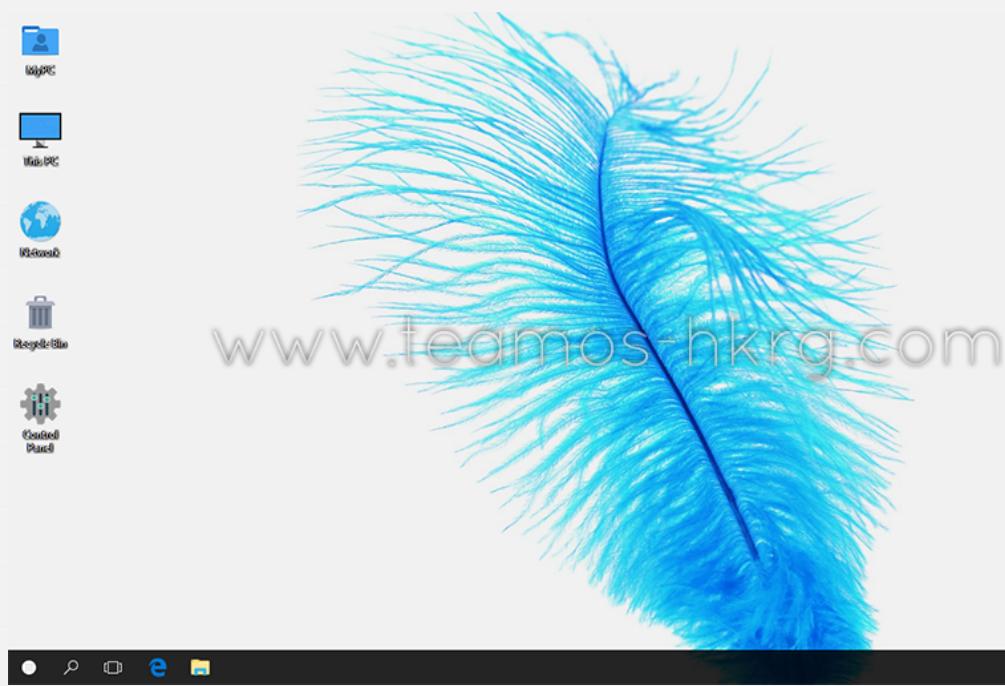

Under Cluster size, select the (Default) (ex: 4096 bytes) it has listed.

Under Format Options, check Quick format.

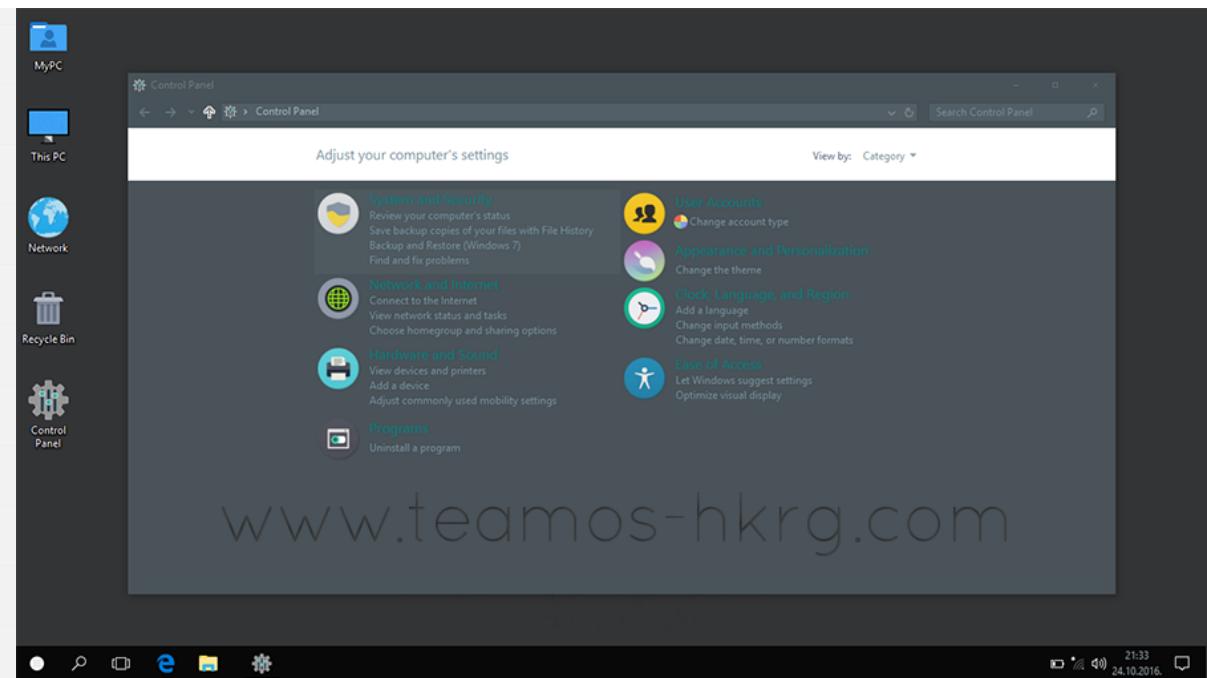

Under Format Options, check Create extended label and icon files.

Under New volume label, you can enter any name you like for the USB flash drive, or leave the default name.

How to turned on Windows Defender?

Go to Run and type regedit

- then expand HKEY LOCAL MACHINE
- then expand Software
- then expand Polices
- then expand Microsoft
- then click Windows defender
- then delete disableAntiService (don't download default)... [See More](#)
